

## **Language Learning, Literature and Communication Skills Developed Through Artificial Intelligence**

Ms Sheela Devi, Assistant Professor, Surya College of Education, Tohana

### **Abstract**

The rapid advancement of Artificial Intelligence (AI) has significantly transformed the field of education, particularly in language learning, literature studies, and the development of communication skills. This research paper explores the role of AI-driven tools and technologies in enhancing language acquisition, improving literary understanding, and strengthening communication competencies among learners. AI applications such as intelligent tutoring systems, language learning apps, automated feedback mechanisms, chatbots, and text-analysis tools provide personalized learning experiences, immediate feedback, and adaptive content based on learners' needs and proficiency levels. In literature studies, AI assists in text interpretation, thematic analysis, and critical engagement by offering diverse perspectives and contextual insights. Furthermore, AI-powered platforms promote effective communication skills by enabling real-time practice, pronunciation correction, and interactive dialogue simulations. The study highlights both the benefits and challenges associated with the integration of AI in language education, including accessibility, learner motivation, ethical concerns, and dependency on technology. The findings suggest that when used responsibly and in combination with traditional teaching methods, Artificial Intelligence can play a vital role in fostering language proficiency, literary appreciation, and effective communication skills in modern educational environments.
